Let's define: Substring between indices i and j Substring with the longest length. Greatest index k of a substring of length k Indices of indices i and j: j + i - 1 and k + i - 1 Greatest index r of a substring of length r Indices of indices r and i: j + r - 1 and k + r - 1 Here is the algorithm: Algorithm for r = 1 to min(l[i], l[j]): for i = 1 to min(l[j], r): if l[i] >= r: k = r - 1 f678ea9f9e
